

Inseego Brings Broadband to Australia With 5G Fixed Wireless Solution for Telstra

October 26, 2021

— Inseego Wavemaker™ PRO 5G CPE provides long-distance wireless for high-speed internet access —

SAN DIEGO & SYDNEY--(BUSINESS WIRE)--Oct. 26, 2021-- A gold mine in Queensland. A winery in New South Wales. A remote worker in Victoria. Across Australia, the need for better broadband is on the rise — not just in capital cities, but in regional and rural areas as well. Now a new 5G/LTE outdoor gateway from Inseego Corp. (NASDAQ: INSG) is extending the reach of the Telstra network to a variety of businesses in hard-to-reach areas.

With high-gain antennas that maximize signal strength, the Inseego 5G FW2000e provides fixed wireless access (FWA) for users in urban, suburban or rural locations — even as far as 17 kilometers away from a cell tower. In addition to long-range performance, the FW2000e can deliver gigabit-plus speeds with sustained high throughput for fast, reliable internet access.

“We’re proud to be selected by Telstra, Australia’s largest mobile network operator, to launch this powerful 5G solution on their network,” said Inseego Chairman and CEO Dan Mondor. “Inseego’s FW2000e solves the ‘last-mile’ broadband challenge that has existed for decades. With performance that goes far beyond other wireless products, the FW2000e effectively and economically extends high-speed broadband networks **many** kilometers further than was previously possible. For mining, transportation, agriculture, tourism and

other sectors with distributed operations — as well as work-from-home — this solution delivers high-speed, secure internet through Telstra’s state-of-the-art 5G network.”

Where no wired broadband has gone before

Building out a wired network, especially into rural areas and other remote locations — getting permits, digging trenches and laying cable — is often too difficult and extremely costly for fixed broadband service providers. And even in the areas they do serve, customers are often frustrated by slow speeds that don’t keep up with today’s demanding applications.

Running on the Telstra network, the Inseego FW2000e solves these problems. This outdoor solution can be installed easily at any customer site — warehouse, branch office, clinic, factory, farm, retail store, university campus, industrial IoT site, entertainment venue or individual residence — to deliver fast, reliable, secure 5G and LTE broadband — at speeds that can outperform typical wired connections.

There’s no place like home

A recent report finds that 67 percent of Australians are now working from home, up 25 percent since the start of the pandemic¹. For many employees who live and work remotely, getting fast, reliable and secure broadband they need for videoconferencing, cloud computing and other work applications has often been difficult or impossible.

And more Australians are moving into these regional areas. Roughly a third of all citizens now reside outside of the city and the ‘rise of the regions’ is escalating as more population shifts into these areas.

Taken together, these trends are driving the growing need for new and better broadband solutions like the FW2000e.

Meet the Wavemaker PRO FW2000e

- **Reliable, long-range 5G/LTE performance** – Unsurpassed antenna gain for greater range and higher throughput at any distance
- **5 Gbps ethernet LAN port with power-over-ethernet (POE)** – Provides a high-speed gateway to indoor routers and other access points
- **Extreme reliability** – IP67-rated durability for harsh environments
- **Inseego Mobile app** – User-friendly mobile app simplifies professional installation and allows users to remotely configure

settings, manage connected devices, reboot and more.

Availability

The Inseego Wavemaker PRO FW2000e is available now through [Telstra Enterprise Group](#).

Trusted and secure

Designed and developed in the U.S., Inseego solutions are trusted by leading mobile operators, government agencies and enterprise customers worldwide. About Inseego Corp.

Inseego Corp. (Nasdaq: INSG) is an industry leader in smart device-to-cloud solutions that extend the 5G network edge, enabling broader 5G coverage, multi-gigabit data speeds, low latency and strong security to deliver highly reliable internet access. Our innovative mobile broadband, fixed wireless access (FWA) solutions, and software platform incorporate the most advanced technologies (including 5G, 4G LTE, Wi-Fi 6 and others) into a wide range of products that provide robust connectivity indoors, outdoors and in the harshest industrial environments. Designed and developed in the USA, Inseego products and SaaS solutions build on the company's patented technologies to provide the highest quality wireless connectivity for service providers, enterprises, and government entities worldwide. www.inseego.com #Putting5GtoWork
