

Inseeo Subscribe Achieves New CMMC Certification, Enabling Service Providers to Support U.S. Government Customers

July 27, 2026

Inseeo's carrier-grade subscriber lifecycle management platform among first platforms to meet new stringent cybersecurity requirements for U.S. federal programs

SAN DIEGO, July 27, 2026 (GLOBE NEWSWIRE) -- Inseeo Corp. (Nasdaq: INSG), the cloud-first wireless edge company, today announced that Inseeo Subscribe, its carrier-grade subscriber lifecycle management platform, has achieved Cybersecurity Maturity Model Certification (CMMC) Level 2, further adding to the platform's ability to uniquely support U.S. communication service providers serving federal government customers.

The U.S. Department of Defense's CMMC program establishes cybersecurity requirements for organizations that process Federal Contract Information (FCI) and Controlled Unclassified Information (CUI), helping protect sensitive information throughout the defense industrial base.

Inseeo Subscribe is a cloud-based SaaS platform that helps service providers economically sell, onboard, and manage complex enterprise and government wireless services at scale. By digitizing subscriber lifecycle management and enabling organization self-service within carrier-controlled environments, the platform helps service providers reduce customer acquisition costs, shorten sales cycles, improve customer retention, and lower the cost of supporting complex accounts.

"Government agencies expect the same digital experiences as commercial customers, but they also require the highest levels of security and compliance," said Avia Dadon, Vice President, Head of Product Management & Business Development for Inseeo Subscribe. "Achieving CMMC certification reinforces our commitment to helping service providers confidently support U.S. federal customers while reducing the operational complexity of serving these highly regulated environments."

The certification complements Inseeo Subscribe's existing government-focused capabilities, including AWS GovCloud deployment, FIPS 140-3 encryption support, U.S.-based operations, and digitized government contract-to-catalog mapping that helps automate complex federal and public sector workflows.

For communication service providers, CMMC certification helps address a critical requirement for supporting eligible U.S. government programs without requiring separate subscriber lifecycle management infrastructure, enabling faster deployment while meeting evolving cybersecurity requirements.

Inseeo Subscribe is available as a SaaS platform for communication service providers serving enterprise and government customers throughout the United States. Learn more at <https://inseeo.com/products/bss/inseeo-subscribe/>.

About Inseeo

Inseeo is a leader in cloud-first wireless edge solutions, delivering secure, resilient connectivity across people, places, and machines. As wireless becomes foundational infrastructure, Inseeo unifies connectivity, management, security, and subscriber lifecycle management into a platform that orchestrates cellular, satellite, Wi-Fi, and emerging wireless technologies at the edge.

Its portfolio includes 5G fixed wireless access routers, MiFi mobile routers, IoT solutions under the Skyus brand, and cloud platforms including Inseeo Connect and Inseeo Subscribe, all designed in the U.S. Built on its core strength and long-term leadership in cellular technology, Inseeo solutions enable service providers and channel partners to deploy and manage enterprise-grade wireless solutions at scale.
